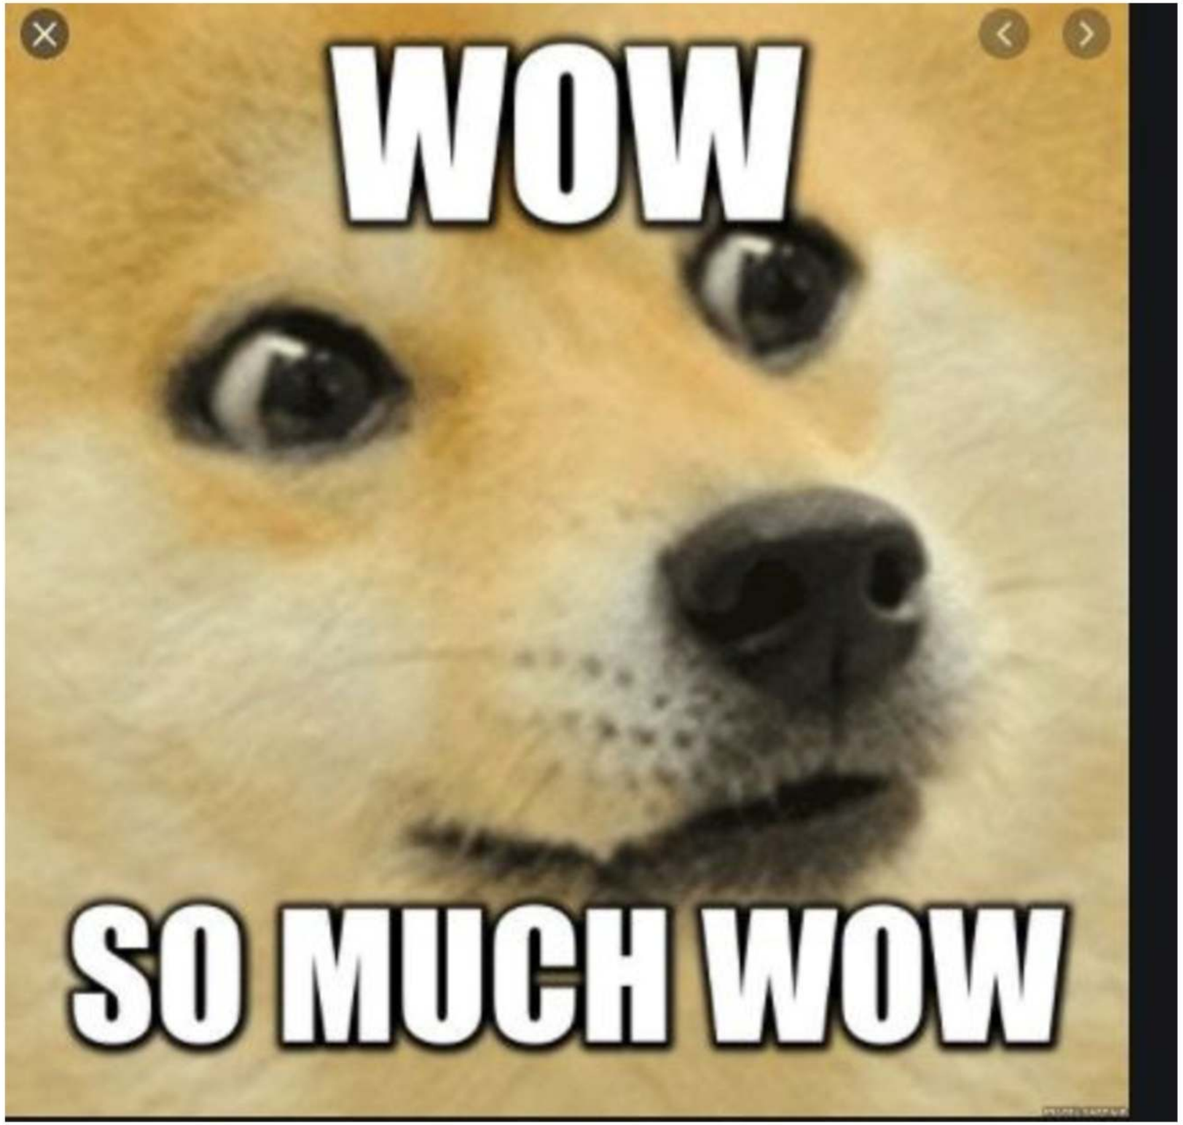
What is Firebase?

Firebase is a Google-backed platform that helps developers build and run mobile and web apps. It offers a variety of tools and services, including cloud storage, authentication, and analytics.



WOW
SO MUCH WOW

What is Firebase Realtime Database?

A Firebase Realtime Database is a cloud-hosted, NoSQL database that allows developers to store and synchronize data across multiple users' devices in real-time

yeh sab kya tha

What is Firebase Auth?

Firebase Authentication is a free service from Google that lets users sign in to apps using email, password, or other sign-in methods. It's a backend solution that helps developers build secure authentication systems for their apps.
