- Smart India Hackathon 2020 Winner
- 16+ Tech Talks

What is Angular ?

Angular is a platform and framework for building single-page applications

- After hearing this

Why you should choose Angular ?

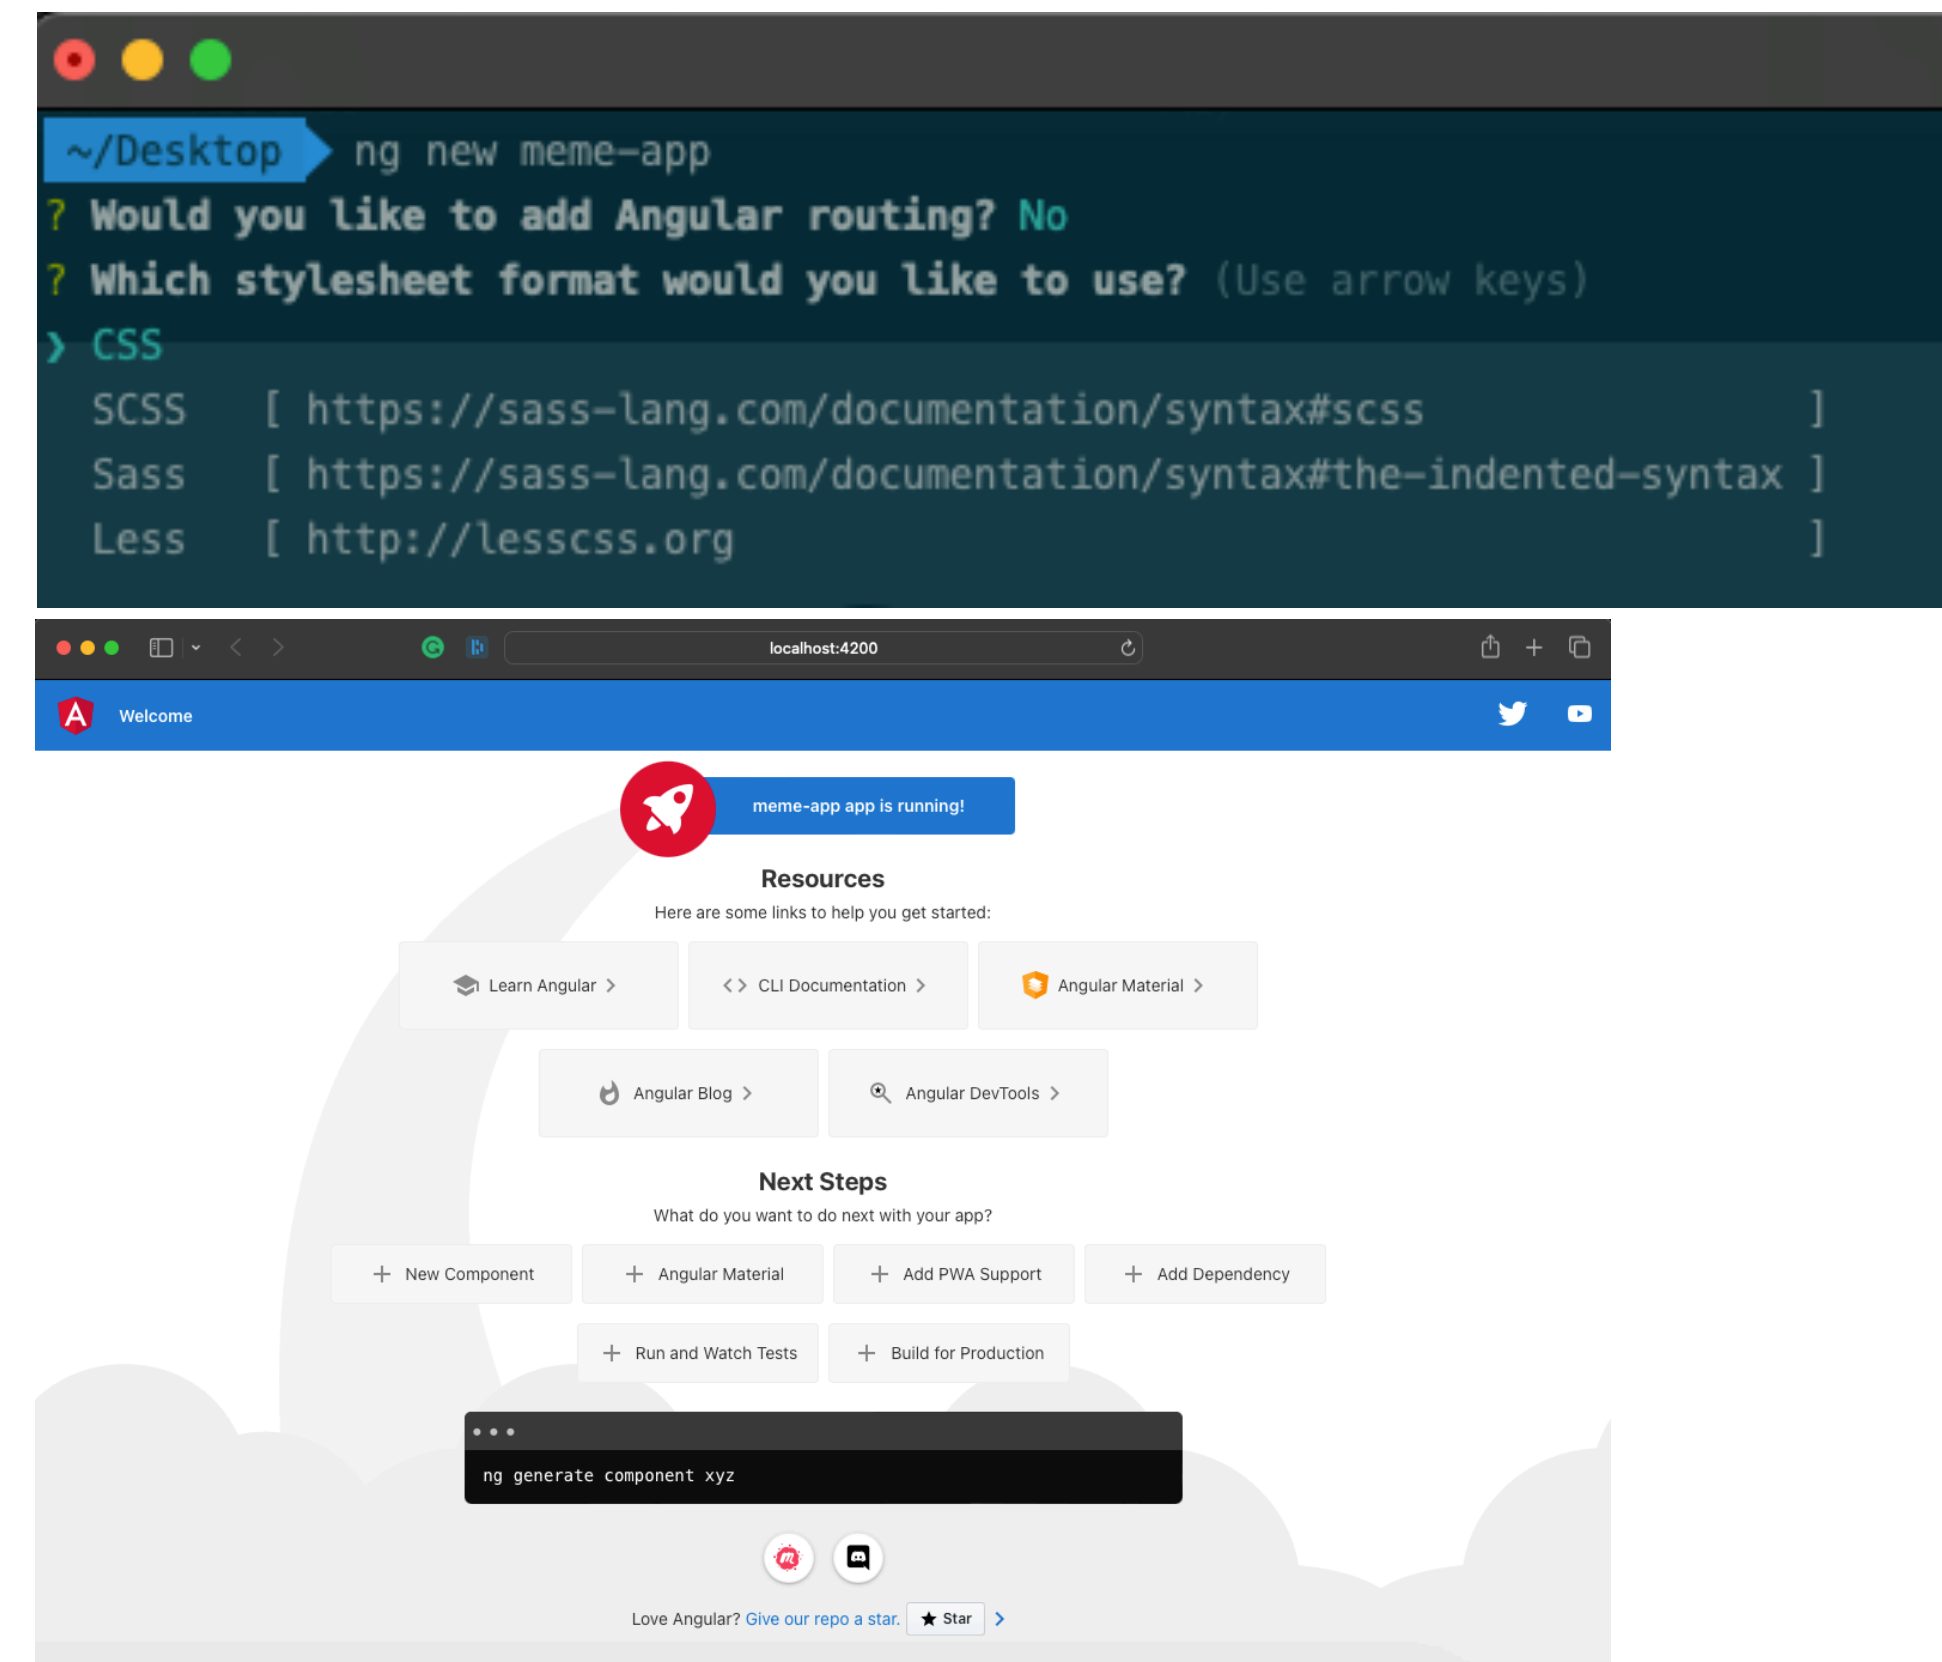

Why ???

- Maintained by Google.
- Large Community and ecosystem.
- Using TypeScript as default language.
- You can even build mobile apps also using Angular. Ex: Ionic

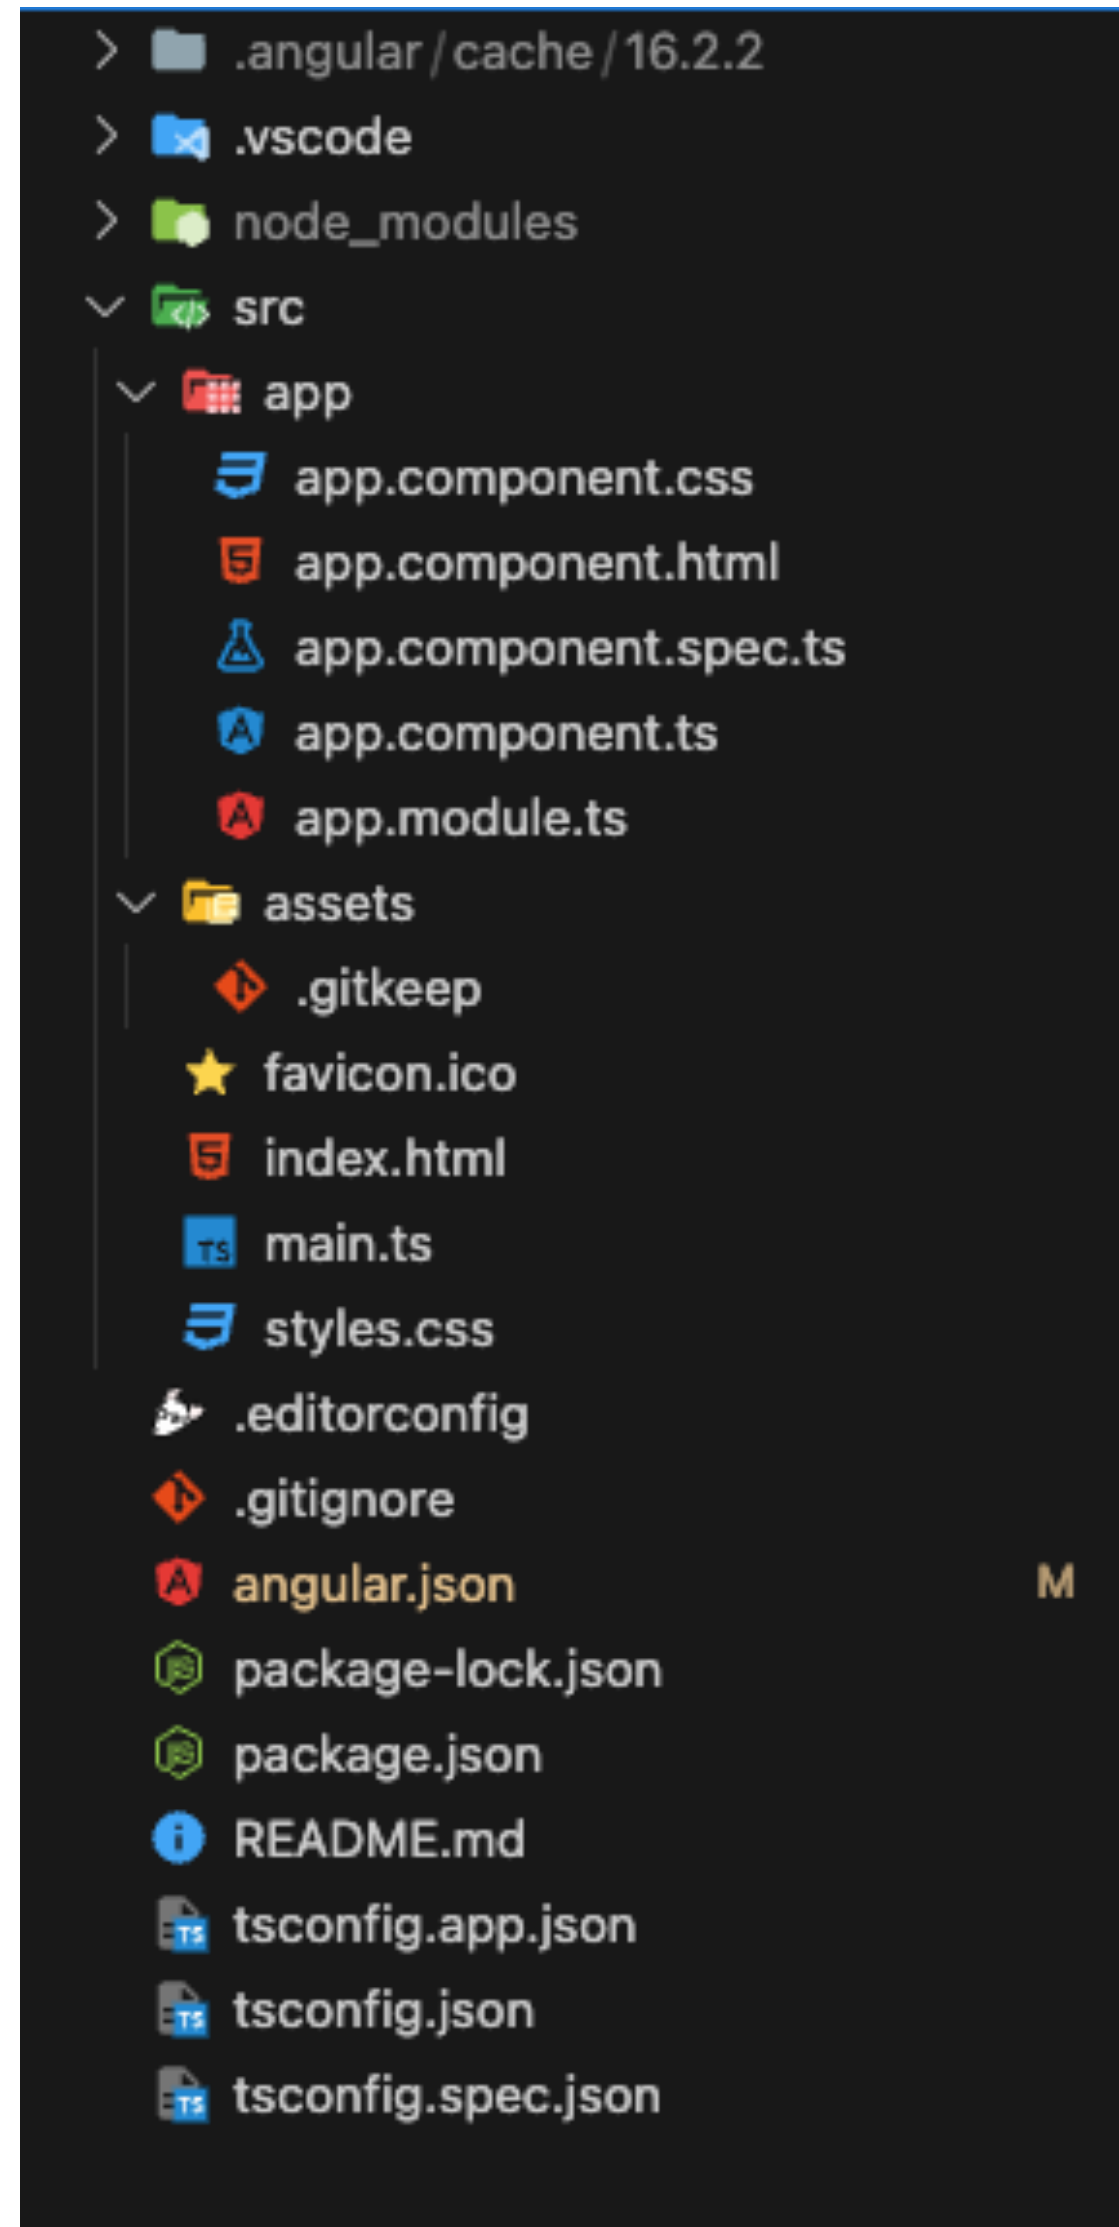

Angular Setup Installation Guide

- Install Angular CLI using the command- `npm install -g @angular/cli`
- Create a new app by using- `ng new meme-app`
- Run Your app- `ng serve --open`

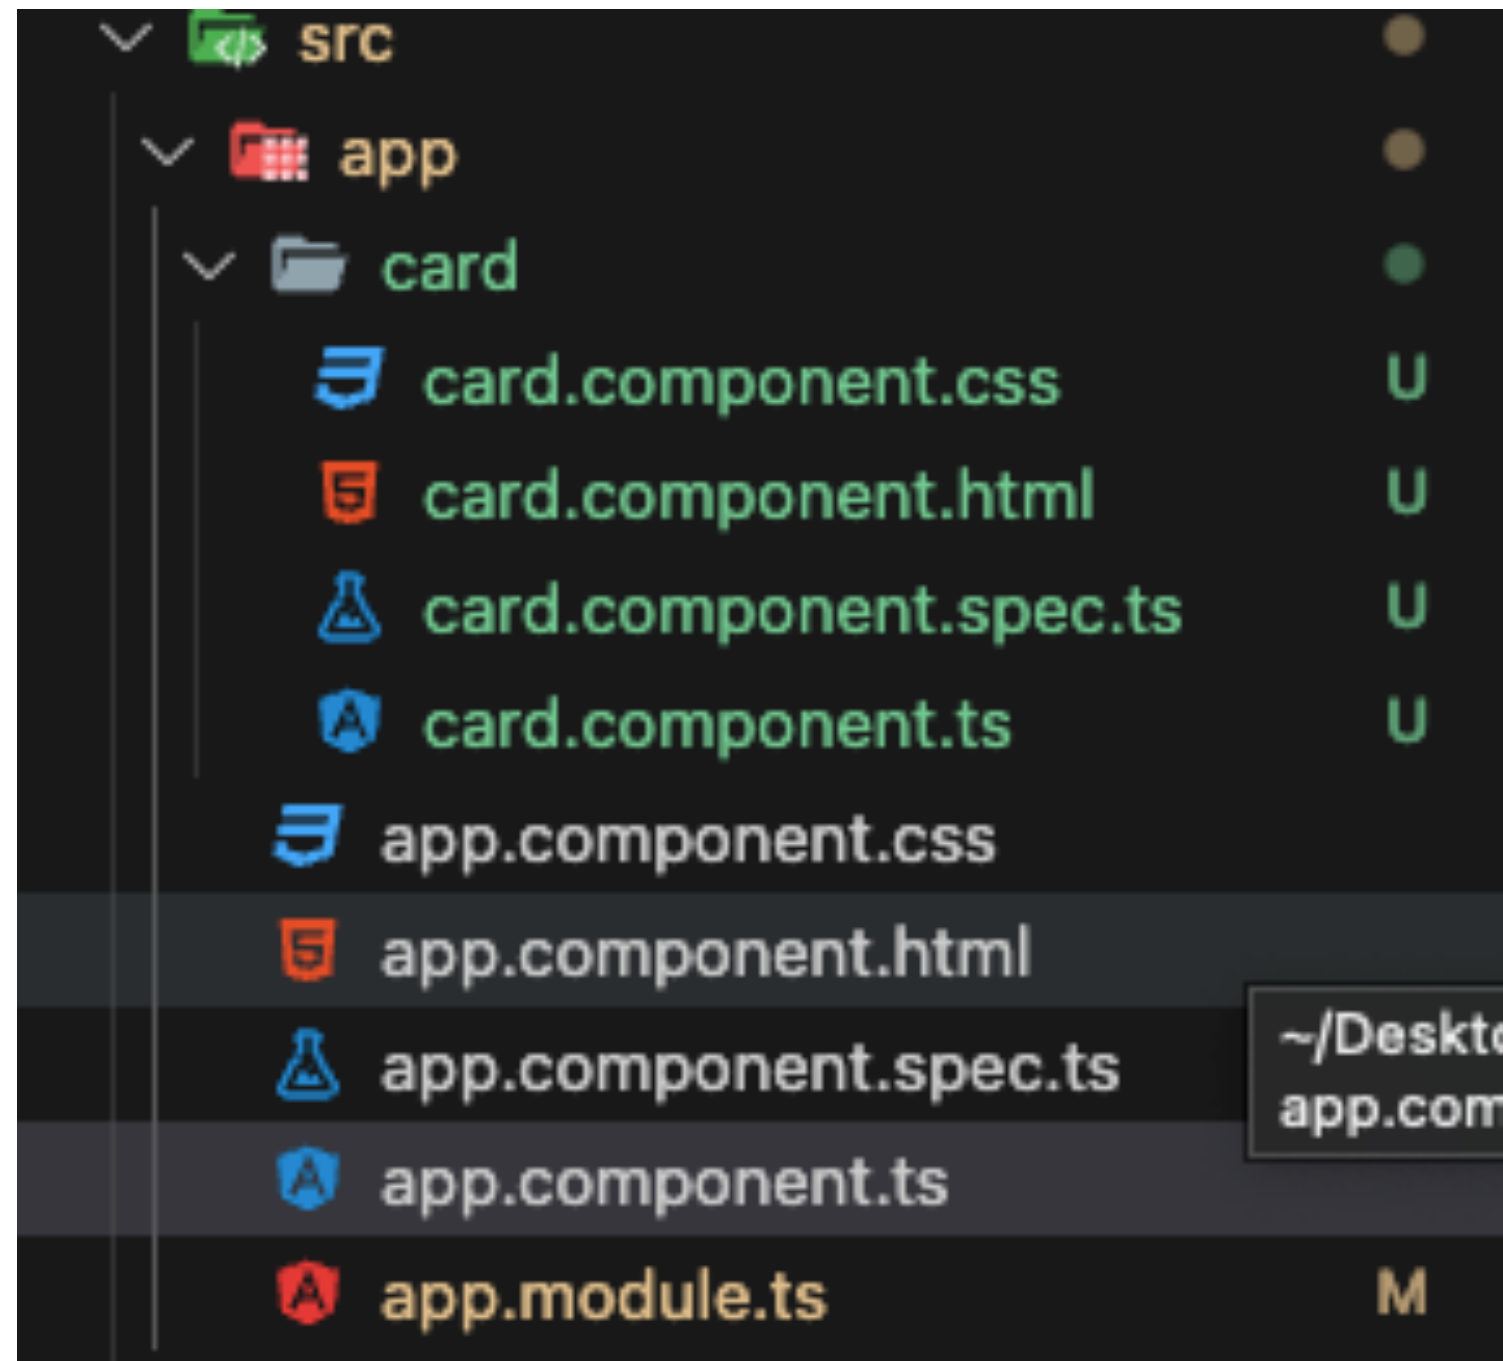

- Project Structure:

Let's see the basics

- To create a component using generate c Card

Define and use state

```
import { Component } from '@angular/core';

@Component({
  selector: 'app-root',
  templateUrl: './app.component.html',
  styleUrls: ['./app.component.css']
})

export class AppComponent {
  title = 'meme-app';
}

// You can use this state like this {{title}} in
// your code
```

Conditional Rendering

- You can conditionally render a block using `ngIf`.

```
<div *ngIf="condition">  
  Content to render when condition is true.  
</div>
```

Map through Components

- You can map components using ngFor.

```
<ul>
  <li *ngFor="let person of people">
    {{ person.name }}
  </li>
</ul>
```

When you should use Angular

Kab use Karna hai ?

- Your tech team is not too large and you want to maintain best practices in your codebase.
- For fast paced projects.

Do you want to learn Angular ?

Thank You
